Commitment to achieving Net Zero.

Razorblue Group Ltd is committed to achieving Net Zero emissions by 2050

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Emissions Reduction Targets

In order to continue our progress to achieving Net Zero, we have adopted the following carbon reduction targets.

We project that carbon emissions will decrease to 298.26 tCO₂e by 2034. This is a reduction of 42.00%.

Progress against our Net Zero target can be seen in the graph below:

Carbon Reduction: Projected Vs. Actual

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

The following environmental management measures and projects have been completed or implemented since the 2024 baseline. The carbon emission reduction achieved by these schemes equate to 72.07 tCO₂e, a 15.73% reduction against the 2024 baseline and the measures will be in effect when performing the contract.

- Gaining certification of ISO:14001
- Implementation of a green team
- A stronger focus on recycling

Future carbon reduction initiatives

In the future we hope to implement further measures such as:

- Staff volunteering days focussing on tackling environmental issues.
- A feasibility assessment on electric vehicles.
